Precision Light Control for the Litemotiv Octa 190

Designed exclusively for the Elinchrom Litemotiv Octa 190 cm, the Recta & Strip Diffuser-Blocker is an essential tool for photographers working in large studios, those who rent the Octa 190, and rental houses looking to expand their light-shaping options. This innovative accessory allows users to transform the Octa's broad light output into either a rectangular softbox or a narrow strip light, providing precise control over how light falls on the subject. Ideal for fashion, portrait, and commercial photographers, it refines lighting setups with enhanced directionality and contrast, ensuring professional-grade results.

By narrowing the beam, it enhances subject separation, making it a must-have for photographers who demand maximum versatility from their lighting setups.
