Abstract

Some users noted the modelling lamp of the D-Lite series cannot be dimmed in proportional or free mode by means of the 2nd left button of the Skyport Plus HS.

Functions of the modelling lamp on D-Lite series

By controlling the lamp by means of the D-Lite control panel, you toggle the button to get the following modes: proportional – full intensity – half intensity.

By controlling the lamp by means of the Skyport Plus HS, you have the functions described below.

The last mode selected on the D-Lite panel influences the dimming functions you will be able to control with the Skyport Plus HS.

At the condition you have selected the unit with the “Select” softkey (frame around the unit line) the following dimming function will be available.

- **D-Lite unit is in proportional mode:**
 - “Mod” softkey: turn dial CW switches ON, turn dial CCW switches OFF
 - “Pwr +/-” softkey: turn dial CW increases the intensity, turn dial CCW decreases the intensity
 - “Mod +/-” softkey: turn dial CW or CCW does not change the intensity
- **D-Lite unit is in full intensity or half intensity:**
 - “Mod” softkey: turn dial CW switches ON, turn dial CCW switches OFF
 - “Pwr +/-” softkey: turn dial CW or CCW does not change the intensity
 - “Mod +/-” softkey: turn dial CW increases the intensity, turn dial CCW decreases the intensity

Note you cannot get the same above control functions if you do not select the unit.
